

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

## GENERAL NOTES.

**The Generic Name of the Gannets.**—Several years ago Mr. G. M. Mathews proposed the recognition (Austral Avian Record, II, Nos. 2-3, Oct. 23, 1913, pp. 55-56) of *Pelecanus bassanus* Linnæus and the other Gannets as a genus apart from the other species of *Sula* Brisson. On a later occasion (Birds Australia, IV, pt. 3, June 23, 1915, pp. 204-207, 217-218) he elaborated the diagnosis of this group and showed conclusively the claims of the Gannets to generic distinction. The feathered face, the proportions of wing, tail, tarsus, and culmen, and particularly the scutellate toes and parts of the front of the tarsus are more than ample characters. He further mentioned (Birds Australia, IV, pt. 3, 1915, p. 202) what had for some time been known, that the name *Dysporus* Illiger (Prodrom. Mamm. et Avium, 1811, p. 279), which has frequently been used in either generic or subgeneric sense for the Gannets, is merely a substitute term for *Sula* Brisson, on grounds of purism. The next name in point of time, *Morus* Vieillot (Analyse Nouv. Méth. d'Ornith. Élément., April, 1816, p. 63), is preoccupied by *Morum* Bolten, 1798, for a genus of *Mollusca*, and for this reason Mr. Mathews has named the group of Gannets *Sulita* (Austral Avian Record, II, No. 7, Jan. 28, 1915, p. 123; type by original designation, *Pelecanus bassanus* Linnæus). The name *Moris* Leach (Syst. Cat. Spec. Indig. Mamm. and Birds Brit. Mus., August, 1816, p. 35; type by monotypy *Moris Bassana* [= *Pelecanus bassanus* Linnæus], he rejects (Birds Australia, IV, pt. 3, 1915, p. 202) as a nomen nudum; and *Moris* Forster (Synop. Cat. Brit. Birds, 1817, p. 59) as a "mis-spelling of *Morus* only" (Birds Australia, IV, pt. 3, 1915, p. 217). According to the A. O. U. Code of Nomenclature, Mr. Mathews is correct in the rejection of *Morus* Vieillot on account of the prior *Morum* Bolten; but neither the A. O. U. Code nor the International Code permits the rejection of *Moris* because of either *Morus* or *Morum*, since *Moris* is a word not merely of different grammatical gender, but of different classical termination. Furthermore, the generic names in the publication of Leach quoted above are not nomina nuda, being properly joined with already duly described specific names; and in this particular case the species is unequivocally recognizable. Moreover, even if Leach's name *Moris* be disregarded, as of course it should not be, it would then be necessary to fall back on *Moris* Forster, 1817, which of course is a perfectly legitimate substitute for *Morus* Vieillot. Thus, in any case, the generic name of the Gannets will become *Moris*, and the species stand as follows:

*Moris bassana* (Linnæus).

*Moris capensis* (Lichtenstein).

*Moris serrator serrator* (Gray).

*Moris serrator dyotti* (Mathews).

HARRY C. OBERHOLSER, Washington, D. C.
